

Sikalastic® 618

Single component, polyurethane, liquid waterproofing membrane

Product Description

Sikalastic®-618 is a single component, cold-applied, moisture-triggered polyurethane membrane. It cures to form a seamless, durable and weather-resistant waterproofing solution for exposed roof areas.

Uses

- Water-proofing of flat and pitched roof structures
- Treatment of new construction and refurbishment of existing structures
- Applicable to existing concrete, roofing felt, brickwork, asbestos cement decks (subject to condition and priming requirements).

Characteristics / Advantages

- Single component, ready to use
- Easy and quick application of reinforced roofing systems with Sika Reemat
- Economic – provides a cost efficient life cycle extension of failing roofs
- Seamless membrane based upon moisture-triggered chemistry
- Vapour permeable
- Retains flexibility at low temperatures

Tests

Approvals / Standards

- ETA 005 W2 pending
- External fire performance: BRoof (t4) & classification under BS4763:1958 ext.F.AA

Product Data

Form

Appearance

Pigmented liquid
RAL 7045, RAL 7009

Packaging

15 litres

Storage Conditions / Shelf Life

Store in original, unopened and undamaged sealed packaging in dry conditions at temperatures between 0 and 25 °C. Protect from frost.
A shelf-life of 9 months is achieved when stored in accordance with the above recommendations at an average temperature of 20 °C. Exposure to higher temperatures will reduce shelf life.
Reference should also be made to the storage recommendations within the material safety datasheet.

Chemical Base

One component moisture-triggered aromatic polyurethane

Density

~1.38 kg/L (+23 °C) (EN ISO 2811-1)
All Density values at +20 °C

Roofing

Product Data Sheet

Edition 03/01/2012

Identification no:

02 0915 2 0500 0 00013

Sikalastic® 618

Version no. UK01

Solid Content	~ 78% by weight (+23 °C / 50% r.h.)
	~ 69% by volume (+23 °C / 50% r.h.)

Flash Point	44 °C (Closed Cup)
--------------------	--------------------

Service Temperature	-20 °C to +90 °C (intermittent)
----------------------------	---------------------------------

Resistance

Chemical Resistance	Sikalastic -618 waterproofing membrane is seen to resist attack from a broad range of dilute acids, alkalis, salt solutions, and organic solvents. In service, this protection is seen to cover exposure to most aggressive environments that may be encountered such as acid rain, traffic pollutants (such as vehicle fumes, petrol, oil, ethylene glycol), sea water, decaying vegetation and industrial atmospheres where higher levels of ground level ozone may be encountered. However, stronger acidic solutions and lower molecular weight alcohols are seen to damage the coating. Accordingly, for applications combining long term roof protection with increased resistance to specific reagents.
----------------------------	--

System Information**Minimum Coverage Rates****Waterproofing Only****10 Year System**

Preparatory Layer	Substrate must be prepared according to outline specification – for further information please contact technical customer services	
Embedment Layer	Sikalastic 618	1.0 L/m ²
	Sika Reemat Premium	
Top Coat	Sikalastic 618	0.75 L/m ²

15 Year System

Preparatory Layer	Substrate must be prepared according to specification – for further information please contact technical customer services	
Embedment Layer	Sikalastic 618	1.0 L/m ²
	Sika Reemat Premium	
Top Coat	Sikalastic 618	1.0 L/m ²

Note: Ideally overcoat within 2 days - If more than 7 days elapse between the application of the Coat(s), clean the existing surface thoroughly before apply Sika Liquid Plastics' Reactivation Primer and the next coat of Sikalastic 618.

Typical Test Data - System

	10 Year System	15 Year System
Dry Film Thickness (mm)	~ 1.3 mm	~ 1.5 mm

Product Data Sheet

Edition 03/01/2012

Sikalastic® 618

Version no. UK01

Tensile Strength (N/mm²)	14.5	18.7
Tensile Load (N/30mm)	660	750
Tear Force (N)	15.2	19.5
Tear Strength (N/mm)	~14	~25
Tensile Elongation (%)	~20	~20

Application Details**Substrate Quality**Cementitious substrates

New concrete should be cured for at least 28 days* and should have a pull off strength $\geq 1.5 \text{ N/mm}^2$. Inspect the concrete, including upstands, all areas should be hammer tested. Concrete must be suitably finished, preferably by wood float or steel pan. A power float finish is acceptable where the surface is prepared to avoid laitance (a tamped finish is not acceptable). The surface finish must be uniform and free from defects such as laitance, voids or honeycombing. The substrate must be of a suitable quality and condition to receive the system. Please refer to specification for further details.

*unless using DTE primer – see DTE Primer Technical Datasheet for further details

Brick and stone

Bricks, blocks and mortar joints must be sound and preferably flush pointed.

Slates, tiles, etc.

Ensure all slates/tiles are sound and securely fastened, replacing obviously broken or missing sections

Asphalt

Asphalt contains volatiles which can cause bleeding and slight non-detrimental staining. The asphalt must be carefully assessed for moisture and/or air entrapment, grade and surface finish prior to any coating works being carried out

Bituminous felt

Ensure that bituminous felt is firmly adhered or mechanically fixed to the substrate. Bituminous felt should not contain any badly degraded areas.

Single ply

Single ply membranes must be correctly laid and securely fixed/adhered. Badly cracked or brittle membranes should be removed.

Bituminous coatings

Bituminous coatings should not have sticky or mobile surfaces, volatile mastic coatings, or old coal tar coatings.

Metals

Metals must be in sound condition

Product Data Sheet

Edition 03/01/2012

Identification no:

02 0915 2 0500 0 00013

Sikalastic® 618

Version no. UK01

Timber substrates

Timber and timber based panel roof decks are to be well constructed, in good condition, firmly adhered, and with sufficient fixings for the nature and location of the site

Paints/Coatings

Ensure the existing material is sound and firmly adhered.

Existing Sikalastic 618 Systems

The existing Sikalastic 618 System should still be soundly adhered to the substrate.

Substrate PreparationCementitious substrates

Laitance, other loose friable material and weak concrete must be completely removed and surface defects such as blowholes and voids must be fully exposed. In severe cases use abrasive blast cleaning, grinding or scarifying equipment to achieve a sound surface.

Repairs to the substrate, filling of joints, blowholes/voids and surface levelling must be carried out using appropriate products.

High spots must be removed e.g. by grinding.

Outgassing is a naturally occurring phenomenon of concrete that can produce pinholes in subsequently applied coatings. The concrete must be carefully assessed for moisture content, air entrapment, and surface finish prior to any coating work. Any requirement for priming must also be considered. Installing the membrane either when the concrete temperature is falling or stable can reduce outgassing. It is generally beneficial, therefore, to apply the embedment coat in the late afternoon or evening

Brick and stone

Thoroughly clean by power wash and allow to dry. Where there is a risk of algal re-growth on absorbent surfaces use Sika Biowash. Please refer to the Sika Biowash Technical Datasheet for further information. Repair any spalling, flaking or other damage and replace any missing jointing.

Asphalt

Thoroughly clean using by power wash and allow to dry. All major cracks should be sealed to allow continuity of the Sikalastic 618 System. Asphalt must be carefully assessed for moisture and/ or air entrapment, grade and surface finish prior to any coating works being carried out. Any priming requirement must also be considered

Bituminous felt

Thoroughly clean using by power wash and allow to dry. Treat blisters by star cutting and removing any underlying water. Allow to dry and re-adhere using Decostik®. Badly degraded areas should be replaced with Carrier Membrane bonded in Decostik®.

Single ply

Various types of single ply sheeting can be coated. For further information please consult Liquid Plastics Technical Customer services team.

Bituminous coatings

Remove loose, degraded, tacky or mobile coatings. Apply the Sikalastic 618 System directly.

Product Data Sheet

Sikalastic® 618

Version no. UK01

Metals

Steelwork is ideally prepared to Sa2½ (Swedish Standard SIS 05: 5900 = 2nd quality BS4232 = S.S.P.C. grade SP10) OR as indicated by the blasting specification which may be of a higher standard. Where blasting to Sa2½ (Swedish Standard SIS 05: 5900 = 2nd quality BS4232 = S.S.P.C. grade SP10) is not permitted alternative blast media or clean metal preparation by pin hammer, etc. is acceptable. Less effective methods of preparation that leave corrosion in-situ may reduce expected life term.

Non-ferrous metals are prepared as follows. Remove any deposits of dust and oxidation and abrade to bright metal. Wire brushing can be used for soft metal such as lead. The surface must be clean and free from grease which, if present, must be removed with a proprietary solution. Wash with detergent, rinse and dry

Timber substrates

Timber and timber based panel roof decks require a complete layer of Carrier Membrane bonded using Decostik® prior to the application of the chosen system. The substrate should then be treated as a felt roof. Small timber protrusions may be treated directly, provided that the timber is of exterior quality, e.g. marine plywood, (see Substrate Priming for further information).

Paints/Coatings

Remove loose or degraded coatings returning to a firm, feathered firm edge. Remaining coatings are only be overcoated if soundly adhered. Ensure the surface is clean and free from grease.

Existing Sikalastic 618 Systems

Clean the membrane using a water jet at approximately 14N/mm² (2000 p.s.i) using detergent and rinse thoroughly. Thoroughly clean by power wash and allow to dry.

Note: For the Waiting Time/Overcoating please refer to the technical datasheet of the appropriate cleaner/primer. Other substrates must be tested for their compatibility. If in doubt, apply a test area first.

Substrate Priming

Substrate	Primer
Cementitious Substrates	Liquid Plastics Quick Cure Primer or Sika Bonding Primer
Brick and Stone	Not required
Slate, tiles etc	Not required
Asphalt	Not required, subject to surface assessment tests
Bituminous Felt	Not required
Single Ply	Adhesion to single ply may vary depending on type, age, etc. Consult Liquid Plastics for further advice on priming requirements.
Bituminous Coatings	Not required
Metals	Liquid Plastics Metal Primer
Timber Substrates	Timber based roof decks require a layer of Carrier Membrane. For small areas of exposed timber (i.e. upstands) use Sika Bonding Primer or Quick Cure Primer, (exposed timber should be Marine ply to BS 1088 or equivalent).

Sikalastic® 618

Version no. UK01

Paints	Subject to adhesion tests, Sika Bonding Primer or Metal Primer for aluminium based solar reflective coatings
Existing Sikalastic 618	Sika Reactivation Primer

Application Conditions / Limitations

Air Temperature	+2°C min. / +40°C max.
Substrate Temperature	+2°C min. / +60°C max.
Substrate Moisture Content	< 4% pbw moisture content. Test method: Sika®-Tramex meter, CM - measurement or Oven-dry-method. No rising moisture according to ASTM (Polyethylene-sheet).
Relative Air Humidity	85% r. h. max.
Dew Point	Beware of condensation! The substrate and uncured membrane must be at least 3°C above the dew point to reduce the risk of condensation or blooming on the membrane finish.

Application Instructions

Mixing	No mixing required
Application Method	<p>Prior to the application of Sikalastic 618 the substrate must be prepared and the priming coat must have cured tack-free. For the waiting time/overcoating please refer to the technical datasheet of the appropriate primer.</p> <p>Apply first coat of Sikalastic 618 and roll in the Sika Reemat Premium whilst wet. Ensure there are no bubbles or creases and that the Sika Reemat Premium overlaps by a minimum of 5cm. Prior to the application of a second and third coat of Sikalastic 618 the indicated waiting time in the table below should be achieved.</p> <p>Please note: Always begin with details prior to waterproofing the horizontal surface. Please refer to the table on the previous page for coverage rates.</p>
Application Tools	For best results apply Sikalastic 618 by brush (for details and penetrations) or roller. Rollers should be disposable medium/long pile simulated sheepskin.
Cleaning of Tools	Clean all tools and application equipment with Thinner C immediately after use. Hardened and/or cured material can only be removed mechanically.
Pot Life	Sikalastic-618 is designed for fast drying. Therefore the material will cure particularly quickly in high temperatures combined with high air humidity. Skin formation starts after approx. 1 hour (+20°C / 50% r.h.).

Waiting**Time/Overcoating**

Before applying Sikalastic®-618 on Sikalastic®-618 allow:

Ambient Conditions	Minimum	Maximum
+5°C/50% r.h.	Allow overnight curing	After seven days the surface must be cleaned and primed with Sika® Reactivation Primer before continuing
+10°C/50% r.h.	8 hours	
+20°C/50% r.h.	6 hours	
+30°C/50% r.h.	4 hours	

Note. Times are approximate and will be affected by changing ambient conditions particularly temperature and relative humidity

Curing Details

Applied Product ready for use

Temperature	Relative humidity	Rain resistant	Touch dry	Full cure
+5 °C	50%	~6 hours	~14 hours	~ 3 days
+10 °C	50%	~4 hours	~8 hours	~ 2 days
+20 °C	50%	~2 hours	~6 hours	~ 1 days
+30 °C	50%	~1 hours	~4 hours	~12 hours

Note: Times are approximate and will be affected by changing ambient conditions particularly temperature and relative humidity.

Notes on Application / Limitations

Do not apply Sikalastic®-618 on substrates with rising moisture..

Sikalastic®-618 is not suitable for permanent water immersion.

Do not dilute Sikalastic®-618 with any solvent.

On substrates likely to exhibit outgassing, apply during falling ambient and substrate temperatures. If applied during rising temperatures "pin holing" may occur from rising air.

Product should be used in conjunction with a safe system of work. Ensure an adequate assessment of all site risks has been conducted prior to work commencing. Refer to the product safety datasheet for further guidance.

Do not use Sikalastic®-618 for indoor applications

Do not apply close to the air intake vent of running air conditioning unit.

The product can be applied by brush or roller. Work well with a brush in difficult areas. Apply subsequent layers after the first layer has cured tack free.

The product can be overcoated with itself – refer to the 'Overcoating' section of this Product Data Sheet..

Use strips of e.g. Sika® Reemat Premium, in order to cover joints, connections or overlaps of bituminous sheets. Please ask our technical service department for detailed recommendations.

The suitability of each system to receive foot traffic varies. For specific recommendations, please contact our technical service department.

Do not apply adhesives or cementitious products (e.g. tile mortar) directly onto Sikalastic®-618

Do not use grit salt and/or other de-icing agents between coats of Sikalastic®-618 as this may affect the cure and inter-coat adhesion of the product.

Whilst Sikalastic®-618 is resistant to most commonly encountered atmospheric pollutants, proprietary cleaning solutions and environmental spoilage, the suitability of the product for use in applications with increased chemical resistance requirements should first be established in consultation with our technical service department.

Do not use grit salt and/or other de-icing agents between coats of Sikalastic 618 as this may interfere with the cure and inter-coat adhesion of the product.

Value Base

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

Health and Safety Information

For information and advice on the safe handling, storage and disposal of chemical products, please refer to the most recent Material Safety Data Sheet.

Specification assistance

NBS is the industry standard specification system, which allows architects, specifiers and engineers to insert clauses into specifications by manufacturer and product, making the process quicker and more efficient. We are members of NBS Plus and therefore detailed up-to-date product information is readily available to create accurate specifications.
